THE NEED FOR FELLOWSHIP SUPPORT

By any measure, Northeastern has earned distinction as a global, experiential research university built on a tradition of engagement with the world. Our graduate students are collaborating across disciplines to solve some of today’s greatest universal challenges—from outsmarting cybercriminals to designing disaster-resilient buildings, from advancing drug delivery to exploring cures for neglected diseases.

But to outpace our competition, Northeastern must continue to attract the brightest scholars, who will seize every opportunity to grow, reinvent, and lead discovery well into the future.

For many talented graduate students, financial considerations are the deciding factor in their choice to attend Northeastern. Fellowships provide our exceptional students with direct aid, and give them the flexibility and freedom to focus on research and to pursue valuable investigative experiences.

Philanthropic support of fellowships will help Northeastern recruit and retain top graduate students from around the globe, and inspire them to explore new lines of inquiry and solve society’s most complex challenges.

POWERING LEARNING AND INNOVATION

Why Fellowships?

- **Fellowships are awards, not loans.** Northeastern’s graduate students do not repay fellowships, which enables them to conduct their research and studies without needing to raise extra income or assume debt that restricts their career choices.

- **Fellowships recruit and retain outstanding scholars.** A fellowship confers prestige on the recipient, who demonstrates both the potential and ambition to pursue cutting-edge education and research.

- **Fellowships support critical needs.** Fellows may use funds to support expenses such as tuition, stipends, lab equipment, and materials, allowing them to devote themselves full time to their work.

- **Fellowships grow Northeastern’s global profile.** By attracting top graduate students from around the world, fellowships in turn recruit first-rate faculty. As these scholars unite to unravel society’s pressing problems, they will grow Northeastern’s stature as an experiential research university.

“Beam formation and signal direction have always challenged electrical engineers. My job is to solve these issues within the human body, at a miniaturized scale. My fellowship gives me the freedom to do this, and to potentially make a big difference in patients’ lives.”

Electrical and Computer Engineering
Sami Alsaif Doctoral Fellowship
OPPORTUNITIES FOR SUPPORT

Establishing a fellowship is a powerful way for a donor to signal a commitment to Northeastern and to provide essential resources to attract and advance talented, diverse graduate students. Endowed funds exist in perpetuity and generate steady, spendable income each year, while current use funds make an instant, present-day impact. A donor may designate either type of fund as unrestricted and used for general support, or as restricted and expended for a defined purpose.

• **Fully funded endowed fellowship.** Creating a fellowship to fully finance one graduate student for one academic year will subsidize costs such as tuition, equipment, housing, and incidentals. This assured support empowers the recipient to focus on his or her investigative work—and by generating spendable income annually, the fellowship will help Northeastern recruit students when economic and political fluctuations affect other funding sources.

• **Partially funded endowed fellowship.** Establishing an endowed fellowship will partly fund one student for one year, eliminating financial hurdles that might impede an exceptional student’s decision to attend Northeastern. Removing these obstacles will give the university an edge as competition for top graduate students intensifies, particularly in nascent disciplines.

• **Fully funded current use fellowship.** Financing a current use fellowship will make an immediate impact by providing one graduate student with readily available monetary resources for one academic year. This enables Northeastern to help our talented scholars meet day-to-day pressing needs ranging from tuition to living expenses, from lab equipment to materials that further their research.

---

“When I was in middle school, I told my parents that my dream career was doing research in the lab, solving problems that jeopardized peoples’ lives. Today, I am exploring drug formulations that enhance therapeutics’ efficiency against cancer, and validating platforms for the delivery of large molecules such as nucleic acids and proteins. Support from my research fund will significantly enrich my professional experience, and motivate me in my future academic career.”
